

SERVER-SIDE SCRIPTING

FEATURING PHP

Only...

- HTML
- CSS
- JS

Software...

- Chrome
- Firefox
- Safari
- Edge
- ...etc.

You are here

- PHP
- Nodejs
- Python
- .NET
- Java
- SQL
- ...lots more

Software...

- Apache
- Nginx
- IIS
- ...etc.

SCRIPTING LANGUAGES

Google: Scripting
language vs.
programming language

Examples

bash

Perl

Ruby

Python

NodeJS

PHP

CLIENT-SIDE SCRIPTING LANGUAGES

Language	Comments
JavaScript	Based on ECMAScript, originally introduced by Netscape Communications, Inc. in conjunction with Sun Microsystems (1995)
JScript	Also based on the ECMAScript standard; introduced by Microsoft to run in early versions of Internet Explorer (1996); later killed off by Microsoft

SERVER-SIDE SCRIPTING LANGUAGES

Language	Comments
PHP	The most popular server-side language used on the web.
ASP.NET	Web-application framework developed by Microsoft.
Node.js	Can run on a multitude of platforms, including Windows, Linux, Unix, Mac, etc.
Java	Used in everything from your car stereo's Bluetooth to NASA applications.
Ruby	Dynamic. Focuses heavily on simplicity.
Perl	A bit of a mashup between C, shell script, AWK, and sed.
Python	Commonly used for business applications; great for beginners to learn.

PHP: HYPERTEXT PREPROCESSOR

PHP IS A "RECURSIVE ACRONYM"

HOW IT WORKS

The normal process is:

1. Request (URI)
2. Locate
3. Respond (files sent)

With server-side scripts, there is a slightly different process

1. Request (URI)
2. Locate
3. Read
4. Execute
5. Rebuild
6. Respond (files sent)

a "trigger"
happens

Remember: the Web uses a client/server network architecture

the
"include"
process

PHP SYNTAX

- Trigger: .php instead of .html
- Among HTML<?php ... ?>
- Variables: \$_____
- Super globals \$_GET[] and \$_POST[]
- Other super globals <https://csc210.org/globals.php>

RUNNING PHP ON A LOCALHOST

- WORKSHOP

- install PHP (?) or use UR Virtual Desktops or work directly on the class web server
- Run the build-in web server

<https://www.php.net/manual/en/features.commandline.webserver.php>

- `cd [to document root]`
- `php -S localhost:80`
